## PREFACE

This report is intended to supersede "Handbook of Agricultural Statistics, Part I - Field Crops", issued March, 1964. The major purpose of the Handbook is twofold:

- (1) to provide in one convenient publication, estimates in both imperial and metric units for the period 1921-1974. Conversion tables for imperial and metric units are presented in the appendix of this publication.
- (2) to provide revised estimates for the 1961-1971 period. Many of the series for this period were revised when new benchmarks were provided by the 1966 and 1971 Censuses of Agriculture.

Subsequent issues of Statistics Canada's crop reports should be used to bring up-to-date estimates of area, production and value.

Data in imperial units was retrieved from CANSIM (Canadian Socio-Economic Information Management System), manipulated and processed to create a photoready copy from which the volumes of this publication were generated. CANSIM is the Statistics Canada computerized data bank. All data appearing in this publication, as well as other data, are available via terminal, on computer printouts, or in machine readable form. Each table in this publication contains the Databank Numbers, which may be used to retrieve series from CANSIM. Accuracy of the included data is the responsibility of Agriculture Division. For further information on CANSIM, write to CANSIM, Current Economic Analysis Division, Statistics Canada, Ottawa, K1A 0Z8, or call (613) 995-7406.

While it is not feasible to include a detailed treatment on statistical techniques in a publication of this type, the following notes may be of interest to users in interpreting the various estimates.

### Source of Statistics

Official field crop statistics are derived from several sources among which are:

- (1) the Census of Agriculture;
- (2) mail questionnaires and enumerative sample surveys undertaken by the Agriculture Division of Statistics Canada in co-operation with statistical offices of provincial departments;
- (3) other government departments and agencies including the Federal and Provincial Departments of Agriculture, the Board of Grain Commissioners and the Canadian Wheat Board;
- (4) processing firms, trade associations and marketing boards;
- (5) other divisions of Statistics Canada who provide basic data on the trade in, and processing of, agricultural commodities.

## PRÉFACE

Le présent bulletin est destiné à remplacer Guide de la statistique agricole, Partie I - Grandes Cultures, qui a paru en mars 1964. Le but premier de ce recueil est double:

- (1) présenter en une seule publication, pour plus de commodité, des estimations exprimées en unités impériales et métriques pour la période 1921-1974. Des tables de conversion de ces unités figurent à la page de cette publication.
- (2) présenter des estimations révisées pour la période 1961-1971. De nombreuses séries pour cette période ont été révisées à l'aide des nouvelles données repères tirées des recensements de l'agriculture de 1966 et de 1971.

Les livraisons à venir des rapports de Statistique Canada sur les cultures devraient renfermer des estimations actualisées des superficies, de la production et des valeurs.

Les données en unités impériales ont été tirées de la base des données CANSIM (Système canadien d'information socio-économique), puis manipulées et traitées de façon à établir un document prêt à être photographié et dont les volumes de cette publication ont été tirés. CANSIM est la banque de données de Statistique Canada. Toutes les données de cette publication, ainsi que d'autres données, sont disponibles par terminal sur imprimé d'ordinateur, ou sur bande. Chaque tableau de cette publication comprend les numéros Databank qui peuvent servir à extraire des séries de CANSIM. La Division de l'Agriculture est responsable de l'exactitude des données présentées. Pour d'autres renseignements sur CANSIM, s'adresser à CANSIM, Division des analyses de conjoncture, Statistique Canada, Ottawa, K1A 0Z8, (613-995-7406).

Il est impossible d'exposer dans une publication comme celle-ci tout le détail des méthodes statistiques employées, mais les notes suivantes peuvent servir aux utilisateurs à interpréter les diverses estimations.

### Provenance des statistiques

La statistique officielle des grandes cultures est puisée à plusieurs sources, dont:

- (1) le recensement de l'agriculture;
- (2) les enquêtes par questionnaire postal et les sondages descriptifs réalisés par la Division de l'agriculture de Statistique Canada avec la collaboration des bureaux statistiques des ministères provinciaux;
- (3) d'autres ministères et organismes publics, notamment les ministères fédéral et provinciaux de l'Agriculture, la Commission des grains de Canada et la Commission canadienne du blé;
- (4) les entreprises de transformation, les associations professionnelles et les commissions de commercialisation;
- (5) d'autres divisions de Statistique Canada qui fournissent des données de base sur le commerce et la transformation des produits agricoles.

## Rounding

**Area** - With the exception of sugar beets, for which measured data are available, estimates of area in imperial units are rounded to the nearest thousand for acreages of 100,000 and over, to the nearest hundred for acreages under 100,000. Estimates in metric units are rounded to the nearest hundred.

**Production** - With the exception of sugar beets, production estimates in imperial units are normally rounded to the nearest thousand. In metric units, production estimates are rounded to the nearest thousand.

**Total farm value** - These estimates are rounded to the nearest thousand dollars.

Due to rounding, the sum of the provincial totals may not balance exactly with regional or all Canada totals. For the same reason, average yields per acre (hectare) multiplied by the acreage (number of hectares) of any crop may not be exactly equal to the production figure, nor will average farm price multiplied by production necessarily balance exactly with the gross farm value.

In metric units, average yields are presented in kilograms per hectare. For conversion to metric tonnes per hectare, the decimal point should be moved three places to the left. Example: 2 415 kilograms per hectare equals 2.415 metric tonnes per hectare.

## Crop Year

For wheat, oats, barley, rye and flaxseed, the crop year begins on August 1 for the years 1924-25 to date, and on September 1 for 1921-22 to 1923-24. The potato crop year begins on July 1 for the entire period. For all other crops, the crop year begins on August 1 throughout the period.

## Average Farm Price

The average price received by farmers for all grades and qualities of each crop.

PETER G. KIRKHAM,  
Chief Statistician of Canada.

## Arrondissement

**Superficie** - Sauf dans le cas de la betterave sucrière pour laquelle on dispose de données de mesure, les estimations des superficies en unités impériales sont arrondies au millier le plus proche pour les superficies de 100,000 et plus et à la centaine la plus proche pour celles inférieures à cette valeur. On arrondit les estimations exprimées en unités métriques à la centaine la plus proche.

**Production** - Sauf dans le cas de la betterave sucrière, on arrondit habituellement les estimations de la production en unités impériales au millier le plus proche. Lorsqu'on les exprime en unités métriques, ces estimations sont arrondies à la centaine la plus proche.

**Valeur totale à la production** - On arrondit ces estimations au millier de dollars le plus proche.

En raison de l'arrondissement, la somme des totaux des provinces peut ne pas correspondre exactement aux totaux régionaux ou nationaux. C'est également pourquoi les rendements moyens à l'acre (hectare) multipliés par le nombre d'acres (hectares) d'une culture donnée peuvent ne pas coïncider tout à fait avec le chiffre de la production. De même, le prix moyen à la production multiplié par la production pourra différer quelque peu de la valeur brute à la

production.

En unités métriques, le rendement moyen est présenté en kilogrammes par hectare. Pour transposer en tonnes métriques par hectare, il suffit de déplacer la décimale de trois unités vers la gauche. Exemple: 2 415 kilogrammes par hectare = 2.415 tonnes métriques par hectare.

## Campagne agricole

Dans le cas du blé, de l'avoine, de l'orge, du seigle et de la graine de lin, la campagne agricole débute le 1<sup>er</sup> août pour la période s'étendant de 1924-25 à nos jours et le 1<sup>er</sup> septembre pour la période 1921-22 - 1923-24. Dans le cas de la pomme de terre, elle commence le 1<sup>er</sup> juillet pour toute la période; dans celui de toutes les autres cultures, elle débute le 1<sup>er</sup> août pour l'intégralité de la période.

## Prix moyen à la production

Il s'agit du prix moyen touché par les exploitants agricoles pour toutes les catégories et les qualités de chacune des cultures.

Le statisticien en chef du Canada,

PETER G. KIRKHAM.

### SYMBOLS

The following standard symbols are used in Statistics Canada publications:

. . figures not available.

. . . figures not appropriate or not applicable.

— nil or zero.

- - amount too small to be expressed.

P preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

### SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

. . nombres indisponibles.

. . . n'ayant pas lieu de figurer.

— néant ou zéro.

- - nombres infimes.

P nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

(1) Most of the soybean crop is grown in Ontario but there were also small acreages in other provinces in the years 1942-43 to 1945-46. The totals for Canada include this production but provincial data are not shown in this handbook. - La plus grande partie du soja se cultive en Ontario mais on en a observé également de petites superficies dans d'autres provinces de 1942-43 à 1945-46. Les totaux pour le Canada reflètent cette production, mais les données par provinces ne figurent pas dans ce recueil.

TABLE 161. TAME HAY - CANADA  
Estimated Acreage, Production, Farm Price and Value

TABLEAU 161. CANADA - FOIN CULTIVÉ

Estimation de la superficie de la production, du prix fermier et de la valeur à la ferme

Crop year — Campagne agricole	Seeded area — Superficie ensemencée		Average yield — Rendement moyen		Production		Average farm price		Total farm value — Valeur totale à la ferme
	Acres	Hectares	Tons per acre — Tonnes par acre	Kg. per hectare — Kg. par hectare	Tons — Tonnes	Metric tonnes — Tonnes métriques	\$ per ton — \$ par tonne	\$ per metric tonne — \$ par tonne métrique

## APPENDIX – APPENDICE

### DOCUMENTATION ON METRIC CONVERSION

#### 1. Area

Acre to hectares: 1 acre = 0.4046856 ha.  
Calculated to nearest hectare, then rounded to the nearest 100 hectares.

#### 2. Production

(a) 1 bushel to metric tonnes (t):

E.g. wheat: 1 bu. = 60 lb. = 27.2158 kg = .0272158 t.  
Therefore, conversion is bushels x 0.0272158 = t for wheat.

$$1 \text{ kg} = 2.2046 \text{ lb.}$$

### DOCUMENTATION SUR LA CONVERSION EN UNITES METRIQUES

#### 1. Superficie

Acres en hectares: 1 acre = 0.4046856 ha.  
Calculé à l'hectare près, puis arrondi aux 100 hectares près.

#### 2. Production

a) 1 boisseau en tonnes métriques (t):

Par ex. blé: 1 boisseau = 60 livres = 27.2158 kg = .0272158 t.  
Par conséquent, la transposition est la suivante: boisseaux x 0.0272158 = t, pour le blé.

$$1 \text{ kg} = 2.2046 \text{ livres}$$

	Pounds — Livres	Kilograms — Kilogrammes	Metric tonnes — Tonnes métriques
1 bushel — boisseau:			
Wheat — Blé . . . . .	60	27.2158	.0272158
Oats — Avoine . . . . .	34	15.4223	.0154223
Barley — Orge . . . . .	48	21.7727	.0217727
Rye — Seigle . . . . .	56	25.4014	.0254014
Mixed grain — Céréales mélangées . . . . .	45	20.4119	.0204119
Flax — Lin . . . . .	56	25.4014	.0254014
Rapeseed — Colza . . . . .	50	22.6799	.0226799
Potatoes — Pommes de terres . . . . .	60	27.2158	.0272158
Peas — Pois . . . . .	60	27.2158	.0272158
Buckwheat — Sarrasin . . . . .	48	21.7727	.0217727
Corn (grain) — Maïs grain . . . . .	56	25.4014	.0254014
Mustard seed — Graine de moutarde . . . . .	50	22.6799	.0226799
Sunflower seed — Graine de tournesol . . . . .	24	10.8863	.0108863

Note: Figures are calculated to the nearest ton and then rounded to the nearest 100 metric tonnes. — Nota: Les chiffres sont calculés à la tonne près puis arrondis aux 100 tonnes métriques près.

(b) Pounds to kilograms:

Multiply by 0.45359237. Round to nearest thousand kilograms.

(c) Hundredweight (cwt.) to metric tonnes (t):

To convert cwt. to t, multiply cwt. by .045359237.  
Round to nearest 100 metric tonnes.

(d) Tons (short, 2,000 lb.) to metric tonnes (t):

Multiply by .90718474. Round to the nearest 100 metric tonnes.

#### 3. Yield

Divide production by area to get yield. Round kg to the nearest whole unit.

$$\frac{\text{metric tonnes} \times 1,000}{\text{hectare}} = \frac{\text{kg}}{\text{hectare}} = \text{kg/hectare}$$

#### 4. Average price per unit

Divide total farm value by production.

$$(a, c, d) \frac{\$}{\text{metric tonnes}} = \$/\text{metric tonne}$$

$$(b) \frac{\$}{\text{kg}} = \$/\text{kg}$$

b) Livres en kilogrammes:

Multiplier par 0.45359237. Arrondir aux 1,000 kilogrammes près.

c) Cwt. en tonnes métriques (t):

Pour convertir des cwt. en t multiplier les cwt. par 0.45359237, puis arrondir aux 100 tonnes métriques près.

d) Tonnes (courtes, 2,000 liv.) en tonnes métriques (t):

Multiplier par .90718474. Arrondir aux cent tonnes métriques près.

#### 3. Rendement

Diviser la production par la superficie pour obtenir le rendement. Arrondir les kg à l'unité entière la plus proche.

$$\frac{\text{tonnes métriques} \times 1,000}{\text{hectare}} = \frac{\text{kg}}{\text{hectare}} = \text{kg/hectare}$$

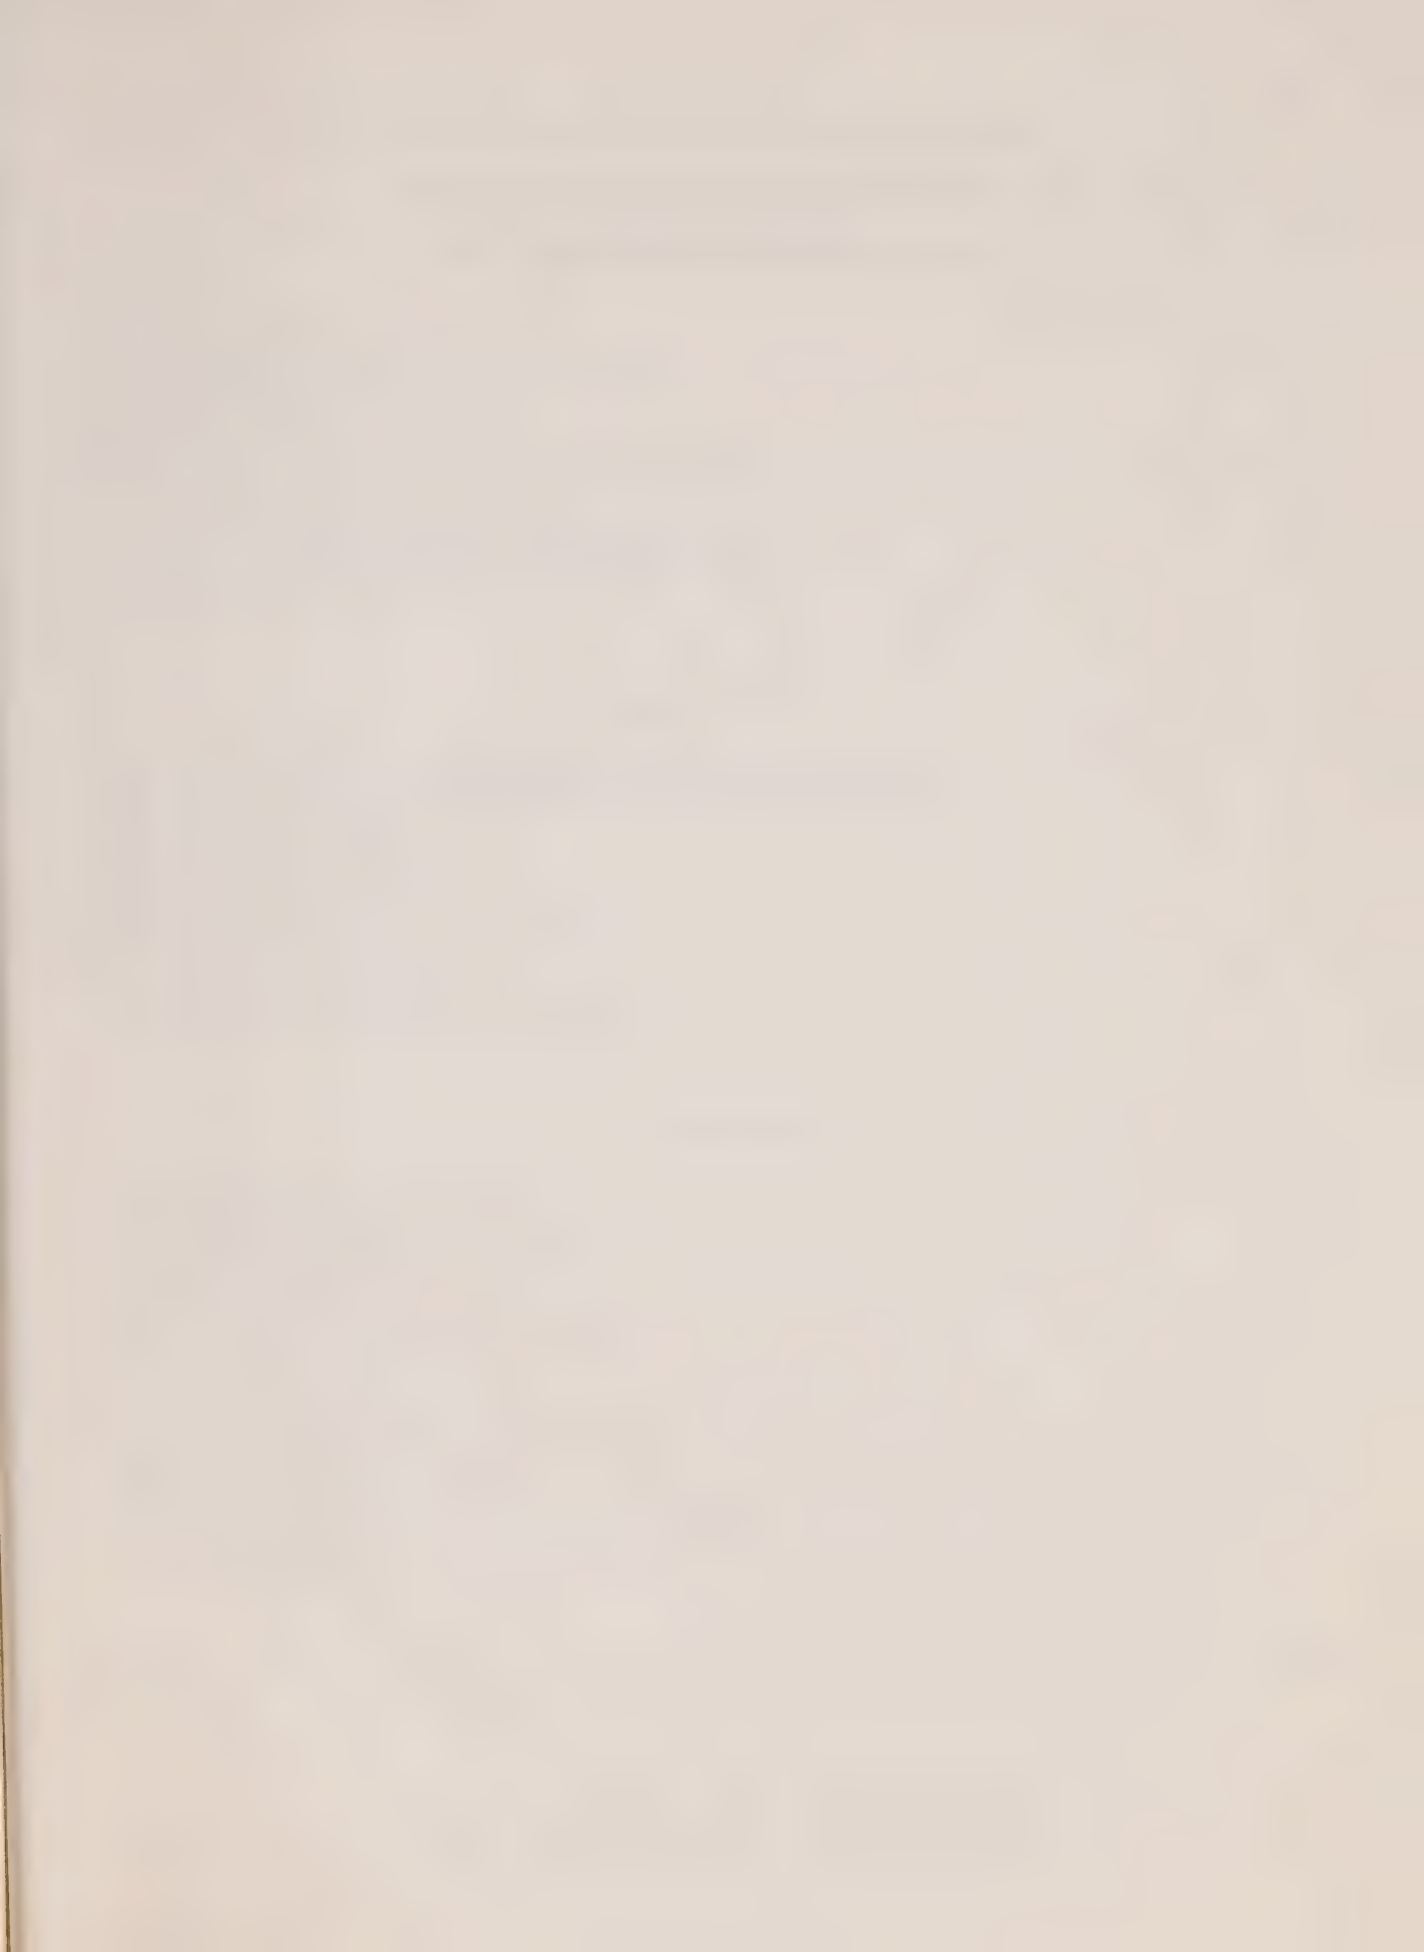

#### 4. Prix moyen par unité

Diviser la valeur agricole totale par la production.

$$(a, c, d) \frac{\$}{\text{tonnes métriques}} = \$/\text{tonne métrique}$$

$$(b) \frac{\$}{\text{kg}} = \$/\text{kg}$$

## PUBLICATIONS COURANTES DE LA DIVISION DE L'AGRICULTURE

Les personnes qui désirent recevoir l'avis des nouvelles publications sont priées d'écrire à la  
Division de l'agriculture, Statistique Canada.
